

ABSTRACT OF THE DISCLOSURE

5 A garbage disposal apparatus comprises a garbage disposition port, a storage
chamber communicating with this garbage disposition port to store uncrushed garbage
and into which flushing water is supplied, a crushing section provided adjacent to the
storage chamber and having a crushing means and a clearance for passing therethrough
garbage crushed by the crushing means, a discharge section provided in communication
with the clearance and having a discharge port for externally discharging the garbage
10 crushed by the crushing section, a driving means for driving the crushing means, a
means for controlling the amount of garbage passing through the clearance per unit of
time, and a means provided at the discharge section or on the downstream side of the
discharge section for controlling the amount of garbage discharged within the discharge
section or on the downstream side of the discharge section.
